DURABLE. FUNCTIONAL. HIGH-QUALITY. PERMANENT SHADE STRUCTURES

TEXAS SHADE SOLUTIONS

We offer a variety of structure styles, designs and colors to maximize not only the shade coverage but also the aesthetic appeal of any space you're looking to cover.

We take pride in designing, manufacturing, and installing the highest quality of shade products in our industry. Each of our products are built to meet or exceed structural building codes and engineer specifications. Warrantied to withstand 90 mph winds and built to building code our structures are permanent, long-lasting, and require virtually no maintenance.

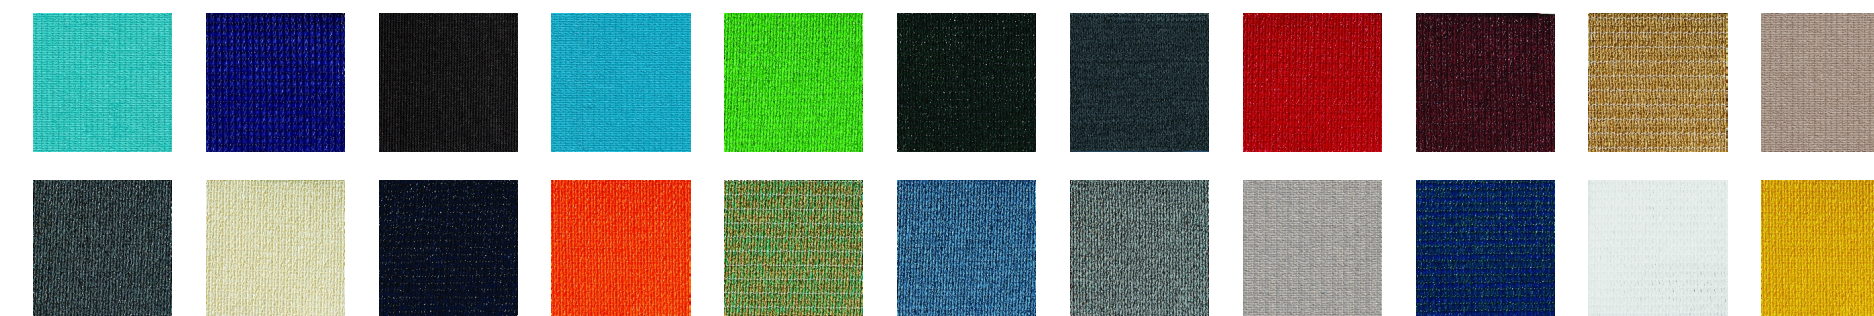

MATERIALS

Long-lasting and heavy-duty, we take pride in each structure that we build and the components that bring it together. From the steel we use to the commercial fabric, we stand by the quality and craftsmanship of each and every one of our products.

DURABLE COMMERCIAL SHADE FABRIC

High quality and heavy duty, Commercial95 was developed as a very strong and durable outdoor fabric used for permanent shade solutions. Commercial95 maximizes sun protection—combining durability and strength to ensure maintenance free longevity and performance.

Our shade fabric blocks up to 95% of UV rays. Its knitted, lock-stitch construction prevents tearing and fraying when cut. To ensure fabric consistency and performance, it is manufactured with 100% virgin grade polymers. It is also breathable which allows for hot air to rise and escape, keeping the air underneath the canopy 10-20° cooler and circulating. Commercial95 is resistant to mold, rot, mildew and sun damage so that whatever color you choose remains vibrant for years. It also holds a “Class A” fire rating and is 100% recyclable.

WARRANTY

We offer the most comprehensive warranty in our industry with a 10-year warranty on our commercial fabric and a 20-year warranty on our steel frame. Warrantied to withstand 90 mph winds and built to engineer specifications, our structures are permanent, long-lasting, and require virtually no maintenance.

TEMPERATURE REDUCTION

10-YEAR WARRANTY

UV PROTECTION

PREMIUM POWDER COATING

The powder coated finish is an electro statically applied polyester powder which is cured for a specific length of time and temperature based on the length and type of steel providing a long-lasting color durable exterior-grade finish. Each of our structures are powder coated to provide the highest quality finish and maintenance free performance that makes our structures look great for many years.

Why powder coating? Powder coating is significantly more durable than conventional paints. It is extremely resistant to chips, abrasion, UV light, fuel and chemicals and many times more durable than ordinary paint. Powder coating provides a consistent smooth gloss, eliminating runs, drips and sags common with painted finishes. Due to the baked sealed finish, powder coating is the most durable and weather-resistant with excellent corrosion resistant properties which are difficult to achieve with other methods or materials. The best reason to choose powder coating is that it is environmentally friendly and there are no solvents or hazardous materials used.

UNCOMPROMISING QUALITY AND CRAFTSMANSHIP

SHADE FABRICATION AND MANUFACTURING

With meticulous attention to detail, we strive for the highest quality of craftsmanship. Every cut, weld, and stitch ensures each component's structural integrity and long-lasting finish.

TEXAS-BASED. TEXAS-TOUGH.

TOUGH, DURABLE AND READY TO WITHSTAND WHATEVER TEXAS' THROWS AT THEM, OUR STRUCTURES ARE BUILT TO LAST.
